Introduction

1.1 Packing List

Product Name	Package
VDX-6328 & VDX-6328-512	<ul style="list-style-type: none">● Embedded Vortex86DX CPU All-in-One Board● Manual & Drivers CD x 1● RS232 cable x 5● PRINTER cable x1● IDE cable x 1● FDD cable x 1● USB cable x 1 (USB port x 2)● GPIO cable x 1● AUDIO Line x2● YKB for Keyboard & PS/2 Mouse x 1

1.2 Product Description

The VDX-6328 family of low-power x86 embedded controller is designed to meet 3.5" specification, and integrated with the following features.

- 800MHz Vortex86DX System-On-Chip
- VGA, TFT/LVDS LCD support up to 1280x1024 resolution
- 256/ 512MB DDR2 system memory
- Enhanced IDE (UltraDMA-100/66/33)
- 10/100Mbps Ethernet
- 3 USB 2.0 (Host)
- Up to 6 serial ports
- Parallel port
- 16-bit GPIO x1
- Onboard 4MB SPI Flash
- PC/104-Plus expansion bus
- Meet PC/104 stacking spec.
- 2 watchdog timer
- PWM 16~24 channels
- JTAG interface
- AMI BIOS
- Mini-PCI (Type III)
- Single voltage +5V DC
- Support extended operating temperature range of -20°C to +70°C

The VDX-6328 3.5" family of embedded controller is designed with backward compatibility in mind, to provide migration path for projects facing end-of-life challenges with their existing x86 based 3.5" controller. The VDX-6328 family of controller is designed as a plug in replacement, with backward compatibility to support legacy software to help extend existing product life cycle without heavy re-engineering.

VDX-6328 is suitable for broad range of data-acquisition, Industrial automation, Process control, Automotive controller, AVL, Intelligent Vehicle management device, Medical device, Human machine interface, Robotics, machinery control And more...application that required small footprint, low-power and low-cost hardware with open industry standard such as 3.5 ".

2.6 Watchdog Timer

There are two watchdog timers in Vortex86SX/DX CPU. One is compatible with M6117D watchdog timer and the other is new. The M6117D compatible watchdog timer is called WDT0 and new one is called WDT1.

We also provide DOS, Linux and WinCE example for your reference.

2.7 GPIO (General Purpose Input / Output)

40 GPIO pins are provided by the Vortex86SX/DX for general usage in the system. All GPIO pins are independent and can be configured as inputs or outputs, with or without pull-up/pull-down resistors.

We also offer DOS, Linux and WinCE example for your reference.

2.8 SPI flash (Serial Peripheral Interface)

As SPI Flash (Serial Peripheral Interface) offers many benefits including: reduced controller pin count, smaller and simpler PCBs, reduced switching noise, less power consumption, and lower system cost

Many of users may consider using a formatted SPI flash to boot for the system or emulate SPI flash as Floppy (A: Driver or B: Driver). Then you must know how to set for this condition in CMOS Setup and boot up under DOS 6.22, X-DOS, DR-DOS and Free DOS.

2.9 PWM (Pulse-width modulation)

Pulse-width modulation (PWM) of a signal or power source involves the modulation of its duty cycle, to either convey information over a communications channel or control the amount of power sent to a load.

The popular applications of pulse width modulation are in speed control of electric motors, volume control of Class D audio amplifiers or brightness control of light sources and many other power electronics applications.

The Vortex86DX SoC integrated 32 channels of PWM interface enabling the Automation, robotic industry to a New Age x86 SoC platform and we also offer the sample code of PWM which will guide the engineer to control the PWM functionality smoothly.

3.0 IDE to SD (Micro-SD)

Vortex86DX SoC also built-in simulation circuit to adapt SD to IDE in order to allow your system to recognize Micro-SD card as C: or D: Driver

SD-1917: 44 pins IDE to SD Adapter is an ideal solution for industrial PC or embedded system and 44 pins IDE to SD Adapter can be easily installed on all Vortex86DX-63xx CPU boards. You or your customers just do the BIOS setting and use SD-1917 to connect IDE connector of Vortex86DX-63xx directly.

<BIOS setting>

- Get into the BIOS setup Utility
- Choose Primary IDE Pin Select: SD card
- Press "F10" to Save configuration changes and exit setup

Driver Installation

VGA

The Vortex86DX processor also use external Display chip “Volari™ Z9s” which is an ultra low powered graphics chipset with total power consumption at around 1-1.5 W. It is capable in providing VGA display output upto 1600x1200. With DVO interface, developers could easily connect flat Panel to support TFT and LVDS output.

LAN

The Vortex86DX processor also integrated 10/100Mbps Ethernet controller that supports both 10/100BASE-T and allows direct connection to your 10/100Mbps Ethernet based Local Area Network for full interaction with local servers, wide area networks such as the Internet.

I/O and IRQ settings can be done by software with the supplied utility software, or it can be set for Plug and Play compatibility. The controller supports: Half / Full-Duplex Ethernet function to double channel bandwidth, auto media detection.

Operating system support

The Vortex86DX-6328 3.5" CPU board provides the VGA and LAN drivers for DOS 6.22 Windows CE 5.0, CE 6.0, Windows 98, Windows XP Professional, Windows Embedded standard (XPE) and Windows 2000.

Please get the drivers from the Driver CD which attached with the standard packing of Vortex86DX-6328 board or please get it from our website.

D. Flat Panel Hardware Setting:

The Vortex86DX-6328 offers the Hardware setting for the various TFT LCD Flat Panels support and please make sure the jumper setting (J32~J38) before you connect the LCD.

Display type setup

Connector	LCD	
	1-2	2-3
J32		C
J34		C
J35	X	X
J36	X	X
J37	C	
J38		C

Note: "C" means close; "X" means open

E. Flat Panel Wiring and Lighting

■ Hardware

Before you connect the TFT LCD Flat Panel with Vortex86DX-6328, please make sure that the input Voltage of LCD is 3.3V or Not

■ BIOS

Please contact or e-mail our regional sales to get the special BIOS for the any TFT LCD Flat Panels.

■ Wiring LCD Cable

Please refer to [Page 23 \(J33: LCD connector\)](#) and [Page 34~39](#).

F. TCP/IP library for DOS real mode

DSock is a TCP/IP library for DOS real mode, which is used by RSIP. It provides simple C functions for programmer to write Internet applications. We also provide Internet examples using DSock: BOOTP/DHCP, FTP server, SMTP client/server, HTTP server, TELNET server, Talk client/server, etc.

DSock provides a lot of example source code. Programmer can add Internet functions to their project easily and save development time. With a utility "MakeROM", programmer also can make a ROM image to fit their application, those examples can be seen in the following Application systems: Mity-Mite Serial Server, Web Camera Tiny Server and RSIP Serial Server.

DSock is free for All products using M6117D/Vortex86/Vortex86SX/Vortex86DX CPU.

G. BIOS Default setting

If the system cannot be booted after BIOS changes are made, Please follow below procedures in order to restore the CMOS as default setting.

- Press “End” Key, when the power on

- Press to enter the AMI BIOS setup
- Press “F9” to Load Optimized Defaults
- Press “F10” to Save configuration changes and exit setup

Warranty

This product is warranted to be in good working order for a period of one year from the date of purchase. Should this product fail to be in good working order at any time during this period, we will, at our option, replace or repair it at no additional charge except as set forth in the following terms. This warranty does not apply to products damaged by misuse, modifications, accident or disaster. Vendor assumes no liability for any damages, lost profits, lost savings or any other incidental or consequential damage resulting from the use, misuse of, originality to use this product. Vendor will not be liable for any claim made by any other related party. Return authorization must be obtained from the vendor before returned merchandise will be accepted. Authorization can be obtained by calling or faxing the vendor and requesting a Return Merchandise Authorization (RMA) number. Returned goods should always be accompanied by a clear problem description.
